PARTICIPANT ORIENTATION

Sponsor Highlights walkthrough

A short guide to the published [BETA] contributor and reviewer forms. Use invented, non-sensitive content. Work independently and record the first place you hesitate.

Two roles. The contributor submits a highlight and checks the receipt and export status. The reviewer opens a Ready batch, inspects a selected item, records a decision, and saves the review. A saved review does not publish a report.

ROUTE THROUGH THE WORKFLOW

BEFORE STARTING

1. Open the published [BETA] app link for your assigned role with your ORNL work account.
2. Confirm the app name. If a connection prompt appears, inspect its services before allowing access.
3. Choose a real project from the list, but use invented, non-sensitive facts for this walkthrough. Do not enter sensitive information.
4. If a task fails, note the exact message and stop that task. Do not repeat a submission or save to work around uncertainty.

What to record: the first label you could not interpret, a choice you could not find, extra clicks or typing, scrolling that hid the next action, and any failure message. The facilitator should not coach the route before your notes are captured.

CONTRIBUTOR

Submit and edit an update

Task goal: make one synthetic activity submission, confirm its receipt, find it in My Submissions, and make one summary correction.

[BETA] Sponsor Highlights
Document progress. Connect research to impact.

My Submissions

01 // Highlight details

Submission Type

○ Activity ✓ Project Status

Report Placement

✓ Project ○ General

Current control reference (redrawn): both states are labeled; a check marks the selected state.

Click the switch or its adjacent labels. Submission Type switches between Activity and Project Status; Report Placement switches between Project and General. Project Status locks placement to Project. The enabled on state is bright green.

Project

Choose its index title (for example, LandScan)

Date

Choose the activity date

For an activity highlight

Choose a category, status, and optional event type

For a project status

Choose project health; choose a risk or None; add proof if available

02 // The development

Write the short summary first. Add the context requested for the selected type. Field labels stay visible while you type; optional details may stay empty. The third section, Report Preview, shows the submission and a red warning if a required field is missing or invalid. Correct the warning before submitting; no TEST ONLY prefix is required.

Choice buttons: project health and risk appear as two-column button grids with icons describing each option. The row and column gaps are similar, and a green button shows the single selected choice. The other buttons are gray, turn green on hover, and remain clickable; selecting another replaces the previous choice. All choices in each grid are visible without a separate list scrollbar. For a status marked At Risk, Delayed, or Paused, explain the health context. If you choose a risk other than None, add the effect or action needed.

FINISH AND CORRECT

1. Submit once and read the receipt and export status before starting another action.
2. Open My Submissions in the header, select your receipt, then choose Edit.
3. Change the summary and choose Submit. The original receipt remains; the correction has a linked receipt.

If Submit is unavailable, read the red message in Report Preview and correct the indicated field. Keep the form open until you see a confirmed receipt; use Retry Submit if the save could not be confirmed.

CONTRIBUTOR REFERENCE VIEWS

Find the status choices

Current UI reference, redrawn from the published [BETA] form. These diagrams show the current controls and states; use the live app for exact placement.

My Submissions

01 // Highlight details

Submission Type

○ Activity ✓ Project Status

Report Placement

✓ Project ○ General

Project Status is selected; report placement is locked to Project.

Current published status controls (redrawn reference)

Project health *

→ On Track	↗ Ahead Of Plan
△ At Risk	⟳ Delayed
‖ Paused	✓ Complete

Risk or dependency

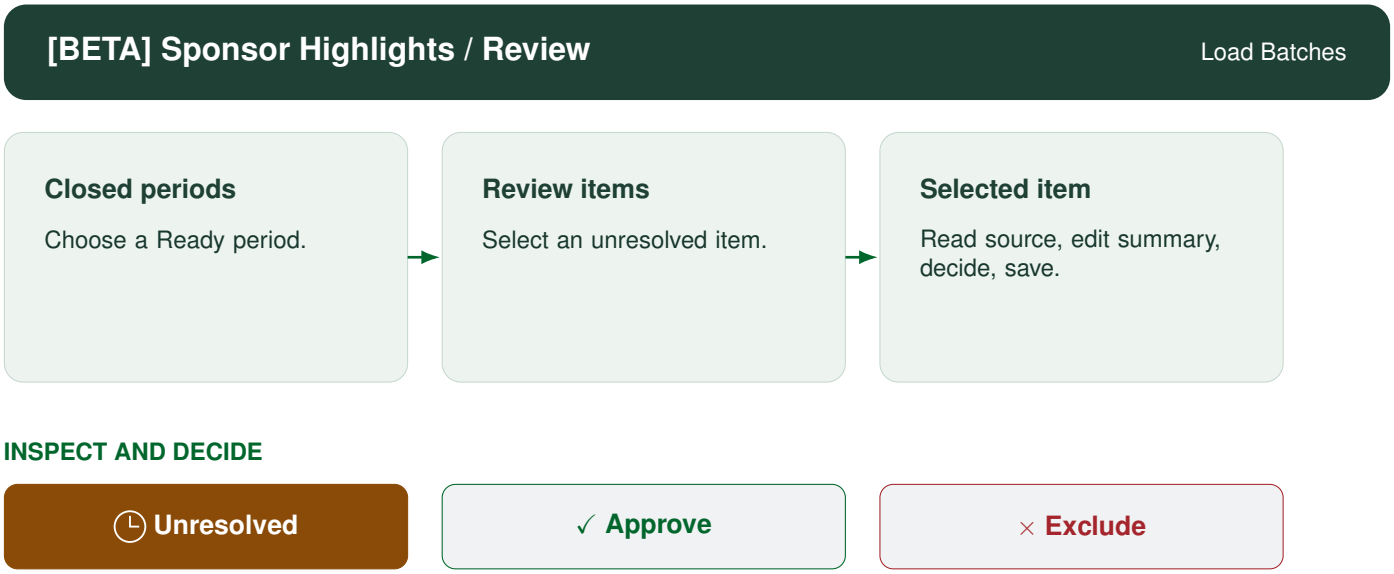

○ None	≡ Data
⊞ Infrastructure	☐ Security Accreditation
⁎ Software Environment	⋆ Sponsor Prioritization

Six more risk buttons follow in the live grid; select one or choose None.

REVIEWER

Review a Ready batch

Task goal: load the assigned Ready batch, inspect one unresolved item, edit its summary if needed, choose a decision, and save.

Current decision controls (redrawn): Unresolved selected.

1. Use the checkbox-marked Needs Review filter to narrow the item list. Select an item and read the source summary. View JSON is optional detail.
2. Edit the one summary field if the report text needs work. Choose one icon button: amber Unresolved, green Approve, or red Exclude. The selected button has a solid fill. Exclude requires a reason; choosing a button does not save the review.
3. Save the review in the ledger. A successful save with Approve selected automatically generates an AI summary suggestion. Check it against the source before choosing Use Suggestion; this changes the local summary, which needs another save. To refine it, add facts in Additional context (optional), then choose Regenerate Summary. Context is limited to 2,000 characters and stored with the summary request in a restricted queue. It does not change the source submission or saved review. Generation can take about a minute.

At a narrow browser width, the period, item, and selected-item blocks stack in reading order. The live ledger uses a three-button decision row that stacks at phone width. Hovering a choice previews its color; a click selects it. Decisions are disabled until an item is selected. Saving a review does not publish a report.

If a Ready batch or item is missing, record that state. Do not save a substitute item to make the walkthrough appear complete.

REVIEWER REFERENCE VIEWS

Save, then review the AI suggestion

Current UI references, redrawn. The live ledger generates a suggestion after a successful approved save.

[BETA] Sponsor Highlights / Review

AI summary suggestion

Approved saves generate a suggestion. Check facts before use.

The generated suggestion appears here. Review it before applying.

Use Suggestion | **Discard**

Additional context (optional)

Add facts, dates, or outcomes to include, then regenerate.

↻ **Regenerate Summary**

Current AI panel after generation (redrawn); suggestion text is explanatory.

Validation in Report Preview (redrawn reference)

03 // Report Preview
△ Choose a project.
The warning appears with the preview at the bottom of the intake form. Complete the required fields above; Submit becomes available when the form is valid.

Report View: opens the selected batch as a report-oriented workspace. Select a project or General Updates from its picker. After Use Suggestion in this view, select Approve again when the wording is ready, then Save. Saving does not publish a report.

Record the independent walkthrough: what you expected, what happened, any label or decision you could not interpret, extra clicks or typing, scrolling that hid the next action, and the exact failure message. Tell the facilitator after you have written the observation.
