PARTICIPANT ORIENTATION

Sponsor Highlights walkthrough

A short guide to the published TEST ONLY contributor and reviewer forms. Use invented, non-sensitive content. Work independently and record the first place you hesitate.

Two roles. The contributor submits a highlight and checks the receipt and export status. The reviewer opens a Ready batch, inspects a selected item, records a decision, and saves the review. A saved review does not publish a report.

ROUTE THROUGH THE TEST WORKFLOW

1

Contributor

Choose type and placement. Write a short update.

2

Receipt

Confirm its receipt and export status. A correction creates a linked receipt.

3

Reviewer

Inspect the Ready batch; edit if needed, decide, and save.

BEFORE STARTING

1. Open the published TEST ONLY app link for your assigned role with your ORNL work account.
2. Confirm the app name. If a connection prompt appears, inspect its services before allowing access.
3. Use fictional people, projects, sponsors, and facts. Do not enter sensitive information.
4. If a task fails, note the exact message and stop that task. Do not repeat a submission or save to work around uncertainty.

What to record: the first label you could not interpret, a choice you could not find, extra clicks or typing, scrolling that hid the next action, and any failure message. The facilitator should not coach the route before your notes are captured.

CONTRIBUTOR

Submit and correct a highlight

Task goal: make one synthetic activity highlight, confirm its receipt, find it in My Submissions, and make one summary correction.

Sponsor Highlights
Document progress. Connect research to impact.

My Submissions

01 // Highlight details

Highlight type

Project status

Report placement

Project highlight

Current control reference (redrawn): aligned toggle values; bright green shows the on state.

Click the switch or its adjacent value label; the hand cursor marks an enabled toggle. Highlight type switches between Activity highlight and Project status. Report placement switches between Project highlight and General update. Project status locks placement to Project highlight.

Project

Select a project

Date

Choose the activity date

For an activity highlight

Choose a category, status, and optional event type

For a project status

Choose project health; choose a risk or None; add proof if available

02 // The development

Write the short summary first. Add the context requested for the selected type. Field labels stay visible while you type; optional details may stay empty. The third section, Report preview, helps you check how the text reads.

Choice buttons: project health and risk appear as two-column button grids with icons describing each option. The row and column gaps are similar, and a green button shows the single selected choice. The other buttons are gray, turn green on hover, and remain clickable; selecting another replaces the previous choice. All choices in each grid are visible without a separate list scrollbar. For a status marked At risk, Delayed, or Paused, explain the health context. If you choose a risk other than None, add the effect or action needed.

FINISH AND CORRECT

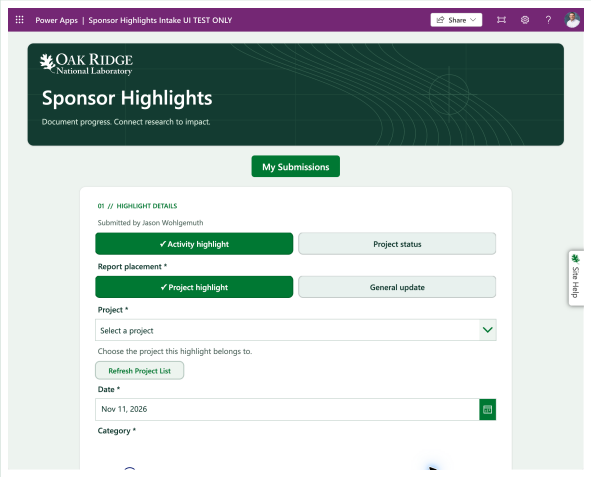

1. Submit once and read the receipt and export status before starting another action.
2. Open My Submissions in the header, select your receipt, then choose Edit selected.
3. Change the summary and save the correction. The original receipt remains; the correction has a linked receipt.

Button icons reinforce the text label. Buttons and toggles have no focus outline. Text fields and dropdowns retain their blue focus borders.

CONTRIBUTOR REFERENCE VIEWS

Find the status choices

The upper image is a historical TEST ONLY reference screenshot. The lower control reference is redrawn from the published November 12 status form because the browser blocked exporting the current capture as a local image. Use the live app for exact placement.

Historical reference screenshot: earlier activity form and header.

Current published status controls (redrawn reference)

Project health *

→ On track	↗ Ahead of plan
△ At risk	⟳ Delayed
‖ Paused	✓ Complete

Risk or dependency

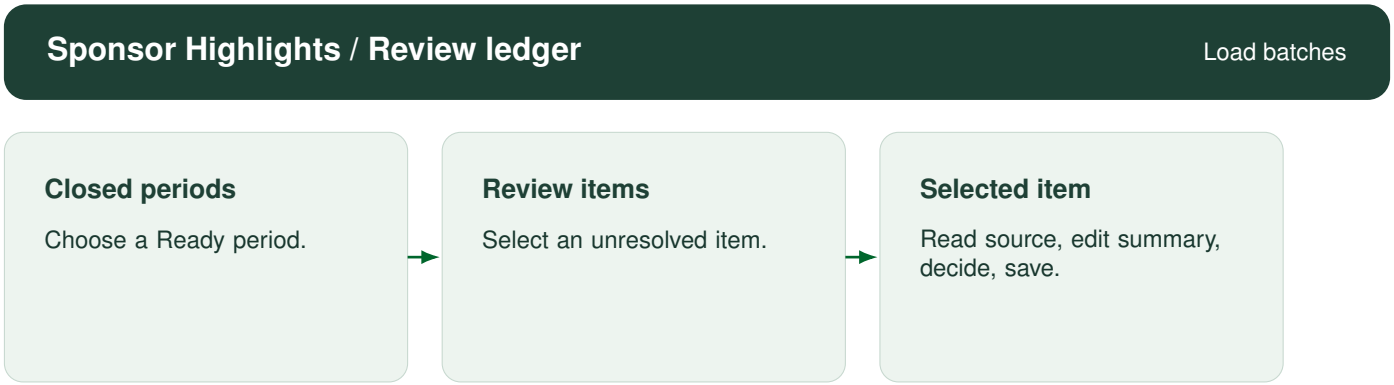

○ None	≡ Data
⊞ Infrastructure	☐ Security accreditation
∗ Software environment	⋆ Sponsor prioritization

Six more risk buttons follow in the live grid; select one or choose None.

REVIEWER

Review a test batch

Task goal: load a Ready TEST ONLY batch, inspect one unresolved item, edit its summary if needed, choose a decision, and save. Fixture review is separate local-only practice.

INSPECT AND DECIDE

1. Use the checkbox-marked Needs review filter to narrow the item list. Select an item and read the source summary. View JSON is optional detail.
2. Edit the one summary field if the report text needs work. Choose Unresolved, Approve, or Exclude. Exclude requires a reason.
3. Save the review in the ledger. The optional AI suggestion must be checked against the source before applying it.

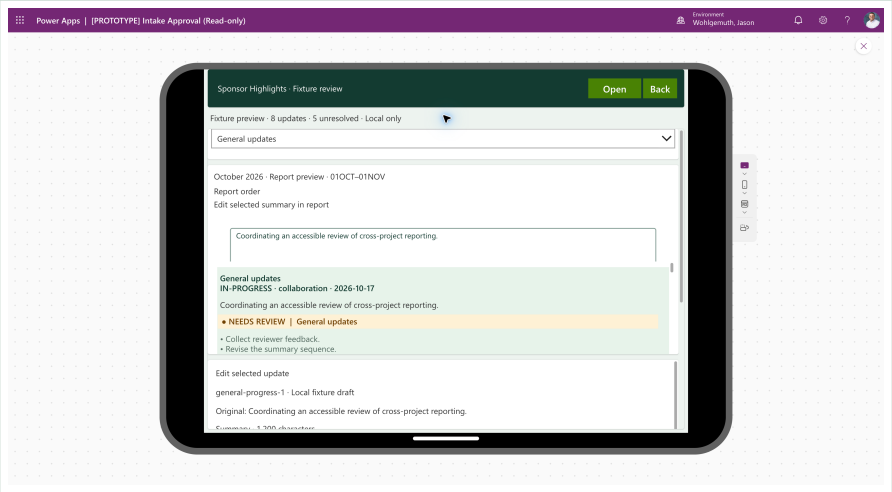

At a narrow browser width, the period, item, and selected-item blocks stack in reading order. The reviewer form uses a short decision row; the fixture practice view uses icon buttons. Saving a review does not publish a report.

If a Ready batch or item is missing, record that state. Do not save a substitute item to make the walkthrough appear complete.

REVIEWER REFERENCE VIEWS

Find the practice decisions

The upper image is a historical TEST ONLY fixture screenshot. The lower decision reference is redrawn from the current published fixture view. The current live ledger is described on page 4.

Review decision / fixture only

Current: Needs review

☐ **Review** | ✓ **Approve** | × **Exclude**

Next problem

Record the independent walkthrough: what you expected, what happened, any label or decision you could not interpret, extra clicks or typing, scrolling that hid the next action, and the exact failure message. Tell the facilitator after you have written the observation.
